EDUCATION

University of Auckland, B.E. (Hons) in Software Engineering Conjoint with B.C in Finance, GPA: 8.36/9.0 (A/A+) March 2022 - Nov 2026

Extracurriculars: SESA, WDCC, AUES, GDSC

Relevant Coursework: Data Structures & Algorithms, Software Architecture, Networks & Security, Databases, Investments & Derivatives (options pricing, portfolio optimisation, CAPM), Corporate Finance (DCF modelling, capital budgeting, WACC), Banking & Financial Institutions

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Java, SQL, HTML, CSS

Frameworks & Tools: React, Node.js, Express, Spring Boot, Git, Docker, JUnit, Kubernetes, AWS

Financial Modelling: DCF, NPV/IRR, CAPM, Portfolio Optimisation

WORK EXPERIENCE

Orion Health

Auckland, NZ

Software Engineering Intern | Python, React, TypeScript, Strapi, Java, Docker, Kubernetes, AWS

Nov 2025 - Current

- Supported Strapi v4 to v5 migration, updating **import/export scripts** across **test, development, and production environments** to ensure **data integrity** and **environment consistency**
- Drove customer platform upgrades from v7.3 to v9.1.0, resolving breaking changes across **Webpack/Neutrino configurations, Strapi Content Manager templates, and Kubernetes/Docker deployments**
- Resolved **20+ bugs** across **accessibility (screen reader), UI, Strapi Content Manager, and Google Maps integration**, improving stability and compliance across client-facing surfaces

Aderant

Auckland, NZ

Software Engineering Intern | Python, React, TypeScript, Express, Node.js, Docker, Kubernetes

Nov 2024 - Feb 2025, July 2025 – Oct 2025

- Co-built and deployed **2 Micro Frontend Components (MFCs)**, improving **code modularity** and enabling **faster feature delivery** across the internal Product Library
- Resolved **25+ client-facing bugs** and authored **3 feature pages** within a **large-scale cloud financial application (Cloud-GL)**, directly improving **usability** and meeting **client requirements**
- Co-developed a **production-grade REST API** extending core application functionality, supporting scalability across Cloud-GL's cloud-based financial platform
- Built **Stridyn Data API migration scripts** handling **schema conversion** from legacy formats and full **CRUD automation** for report entities, accelerating **data migration workflows**
- Led **il8n implementation** with **automated string detection tooling** and upgraded **3+ repos to PNPM**, streamlining **CI/CD pipelines** and **Docker configurations** across Cloud-GL

PROJECTS

Clinical Management System for New Zealand College of Chinese Medicine | TypeScript, React.js, Node.js, Express, Supabase, TailwindCSS,

Vite, Axios

Jan 2025 – In Progress

- Developing a production-ready full-stack healthcare application supporting medical notetaking, appointment booking and clinical workflows for Medical Practitioners.
- Designed and implemented RESTful APIs with Express.js and Supabase to manage patients, treatment records, bookings, users, and secure authentication with proper validation.
- Developed a scalable, responsive frontend using React, Typescript, TailwindCSS, integrating advanced features such as real-time search, dynamic forms, time zone-aware booking, role-based access, while optimising performance with Vite.

Professor Turing | P4 University Project | React.js, TypeScript, Node.js, Express, PostgreSQL, VibekitSDK

Mar 2025 – November 2025

- Built a production-ready educational platform utilising AI Agents that are context and course-aware, utilising LLMs via the VibekitSDK for adaptive learning.
- Engineered core modules including an AI Tutor with Socratic learning, an AI Interviewer for real-time code analysis, and a VS Code Extension offering context-aware feedback through multi-provider AI chat integration.
- Implemented a scalable backend with RESTful APIs, microservices architecture, and coursebook processing pipelines, enabling real-time conversations, intelligent prompt engineering, and AI-driven student analytics with adaptive learning path recommendations.
- Awarded Best Project (Games & Education category) for project excellence and innovation

IntelliMock | React.js, Typescript, Spring Boot, Java, MongoDB, LangChain4j, Vitest, Netlify, Render, Docker

March 2025 – June 2025

- Developed a dynamic AI-driven mock interview platform to help job seekers prepare via personalised, context-aware interview simulators that analyses user CVs, job descriptions, and real-time responses.
- Implemented core AI integration using OpenAI GPT-4o-mini via LangChain4j, enabling intelligent conversation flows, adaptive questioning, and nuanced feedback based on user input and uploaded documents.
- Deployed scalable cloud infrastructure; frontend on Netlify with CI/CD, backend on Render with Docker containers, and MongoDB Atlas for managed database hosting.
