EDUCATION

University of Auckland, B.E. (Hons) in Software Engineering Conjoint with B.C in Finance, GPA: 8.36/9.0 (A/A+) March 2022 - Nov 2026

Extracurriculars: SESA (Software Engineering Students Association), WDCC (Web Development & Consulting Club), AUES (Auckland University Engineering Society), GDSC (Google Developer Student Club)

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Java, SQL, HTML, CSS

Frameworks & Tools: React, Node.js, Express, Springboot, Vaadin, Git, Docker, JUnit, Kubernetes, Vaadin

WORK EXPERIENCES

Aderant

Auckland, NZ

Software Engineering Intern | React, TypeScript, Express, Node, Docker, Kubernetes

Nov 2024 - Feb 2025, July 2025 – Oct 2025

- **Co-Built and Co-Deployed 2 Micro Frontend Components (MFCs)** using React, TypeScript, Node.js and Express for the internal **Product Library**, improving Code Modularity and enabling faster feature development.
- Resolved **~20 Client-Facing bugs** and authored **3 new Feature Pages** for the Cloud-GL application, directly enhancing usability and client requirements.
- **Co-Developed a production-grade API** for a major application module, enabling critical functionality and supporting scalability across the Cloud-GL platform.

Seriously Addictive Maths

Auckland, NZ

Lead Mathematics Tutor

Jan 2023 – Current

- Conducted one-on-one and group sessions whilst utilising creative and engaging teaching methods to promote participation and ensure knowledge retention.
- Tracked student progress, provided regular feedback to parents on student development, and catered to feedback received.

PROJECTS

Clinical Management System for New Zealand College of Chinese Medicine | TypeScript, React.js, Node.js, Express, Supabase, TailwindCSS,

Vite, Axios

Jan 2025 – In Progress

- Co-developing a production-ready full-stack healthcare application supporting medical notetaking appointment booking and clinical workflows for Medical Practitioners.
- Co-designed and implemented RESTful APIs with Express.js and Supabase to manage patients, treatment records, bookings, users, and secure authentication with proper validation.
- Co-developed a scalable, responsive frontend using React, Typescript, TailwindCSS, integrating advanced features such as real-time search, dynamic forms, time zone-aware booking, role-based access, while optimising performance with Vite.

Professor Turing | P4 University Project | React.js, TypeScript, Node.js Express, PostgreSQL, VibekitSDK

Mar 2025- In Progress

- Co-building a production-ready educational platform utilising AI Agents that are context and course-aware, utilising LLMs via the VibekitSDK for adaptive learning.
- Co-engineered core modules including an AI Tutor with Socratic learning, an AI Interviewer for real-time code analysis, and a VS Code Extension offering context-aware feedback through multi-provider AI chat integration.
- Co-implemented a scalable backend with RESTful APIs, microservices architecture, and coursebook processing pipelines, enabling real-time conversations, intelligent prompt engineering, and AI-driven student analytics with adaptive learning path recommendations.

IntelliMock | CS732 Group Project | React.js, Typescript, Springboot, Java, MongoDB, LangChain4j, Vitest, Netlify, Render, Docker

March 2025 – June 2025

- Co-developed a dynamic AI-driven mock interview platform to help job seekers prepare via personalised, context-aware interview simulators. That analyse user CVs, job descriptions, and real-time responses.
- Co-implemented core AI integration using OpenAI GPT-4o-mini via LangChain4j, enabling intelligent conversation flows, adaptive questioning, and nuanced feedback based on user input and uploaded documents.
- Deployed scalable cloud infrastructure; frontend on Netlify with CI/CD, backend on Render with Docker containers, and MongoDB Atlas for managed database hosting.

FinTrack | SOFTENG310 Group Project | Java, Springboot, MongoDB, CSS

July 2024 - Nov 2024

- Co-developed a comprehensive financial management platform for personal and business use, enabling users to track income, goals, expenses, budgets and forecast asset growth.
- Co-implemented robust backend logic using Springboot and Java, supporting features like user profile management, expense categorisation, goal tracking, and income forecasting.
- Built an interactive, user-friendly UI with Vaadin, incorporating dynamic data visualisation and intuitive dashboards for financial insights and budget monitoring.
- Configured CI/CD pipelines with Render, enabling automatic builds and deployments.
